

REMARKS

In filing an RCE, the present amendment has been filed.

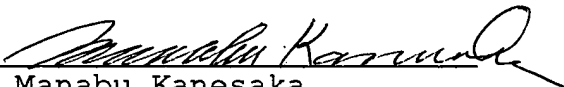

In claim 1, it is clarified that the hook main portion has an upper portion, a lower portion rotationally attached to the case member, and an elastic member projecting rearwardly and upwardly from the lower portion to the upper portion. Namely, the elastic member extends from the lower portion to the upper portion.

This structure is clearly different from that shown in Yamada, and is patentable over Yamada.

Respectfully Submitted,
